

CONFIDENTIAL

# Energy Productivity: A Foundation for Competitiveness, Security, and Sustainability

Discussion with Council on Competitiveness—Energy Security, Innovation, and Sustainability Initiative  
September 14, 2007

This report is solely for the use of client personnel. No part of it may be circulated, quoted, or reproduced for distribution outside the client organization without prior written approval from McKinsey & Company. This material was used by McKinsey & Company during an oral presentation; it is not a complete record of the discussion.

# MOST DEMAND GROWTH COMES FROM DEVELOPING ECONOMIES...

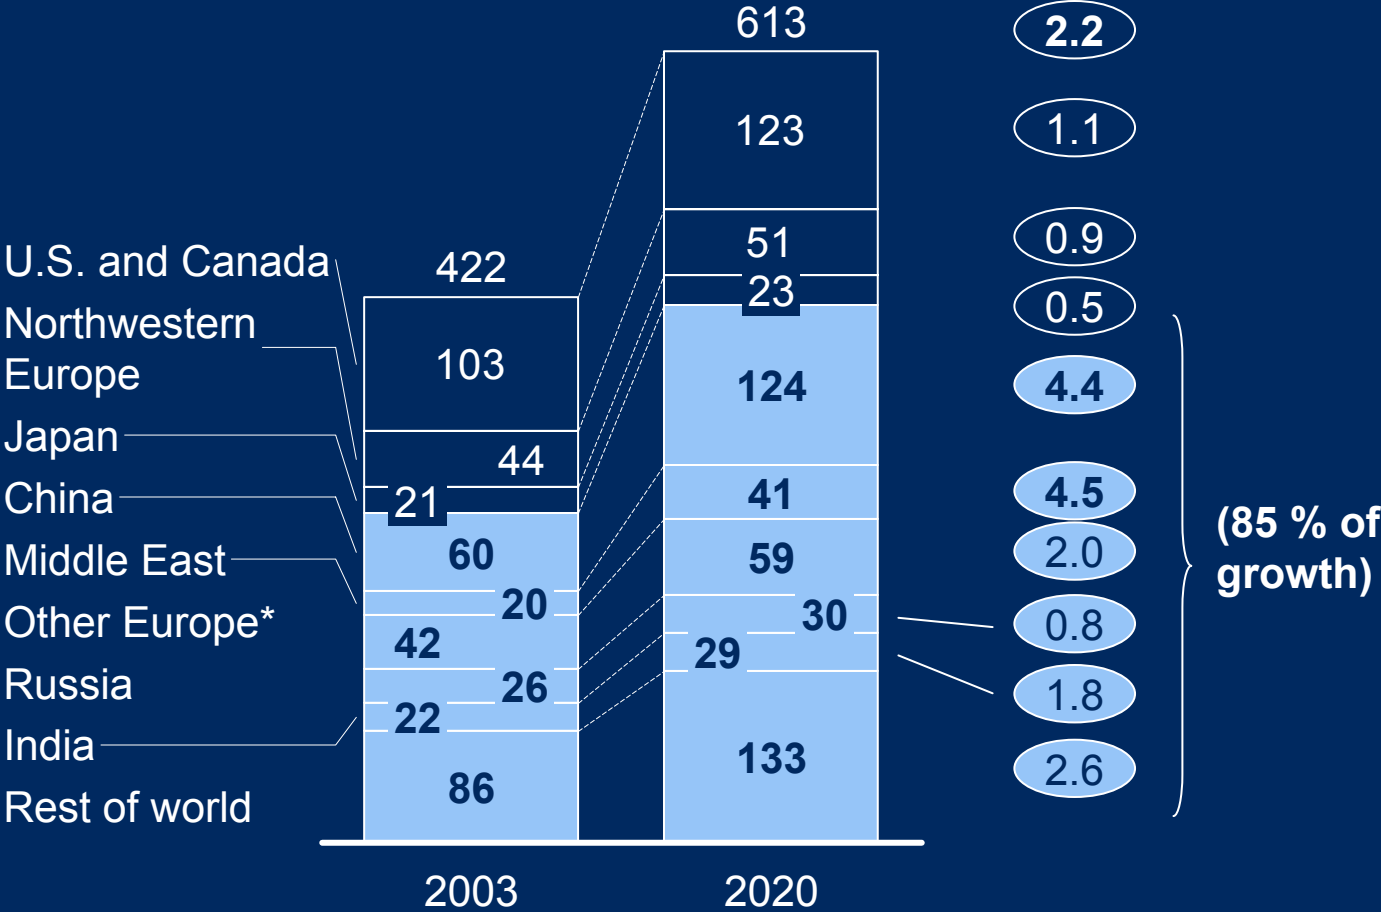

## End-use energy demand\* by region

QBTU

2003-2020  
CAGR

■ Developing regions

%

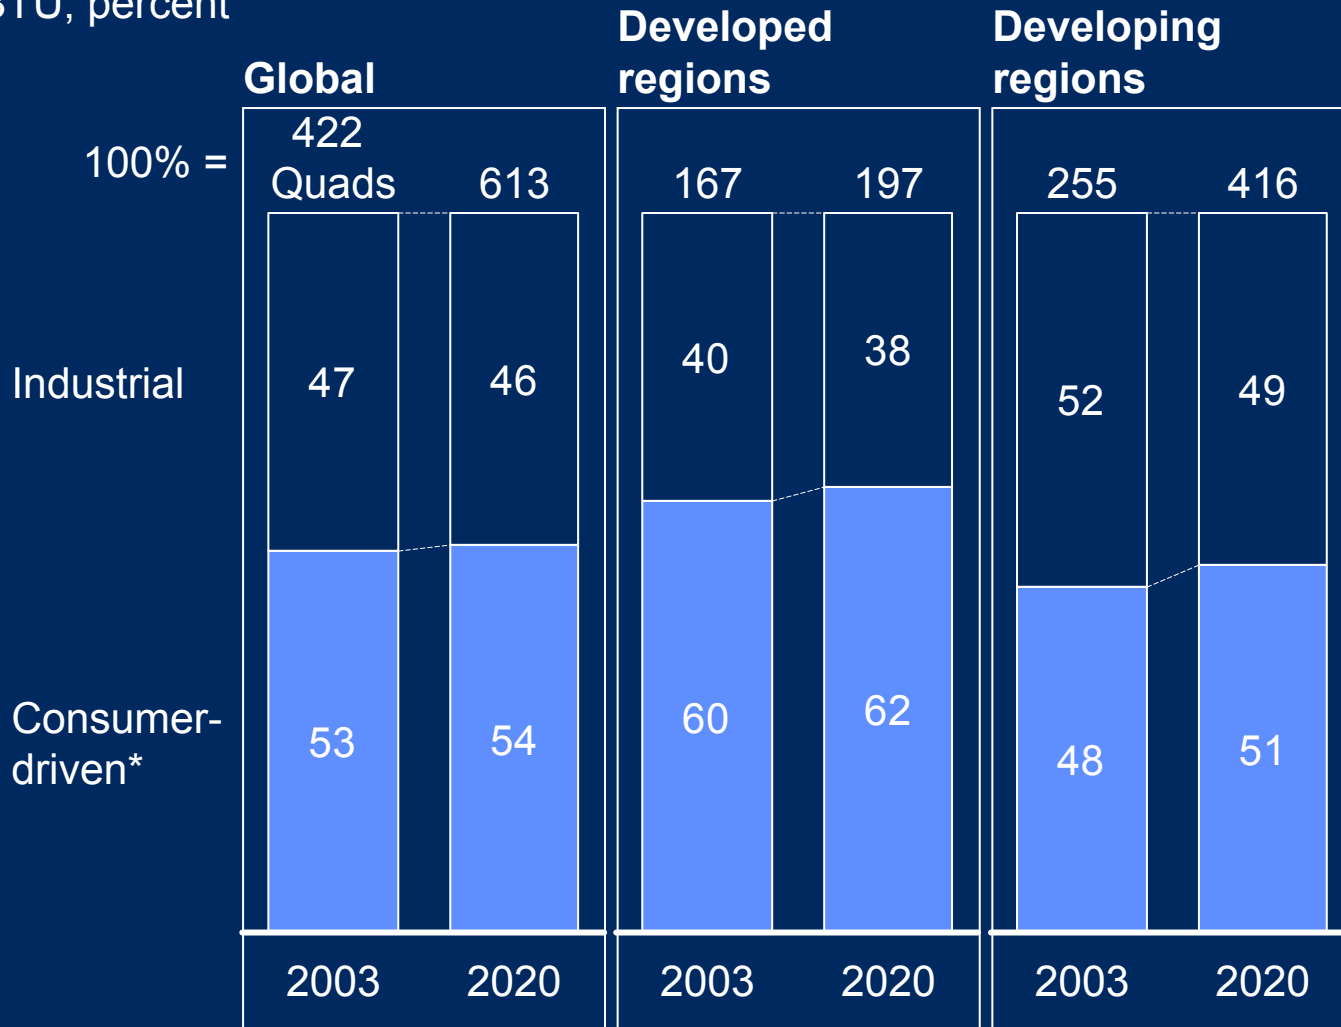

\* Transformation losses (power generation, refining) allocated to end-use segments.

\*\* Includes Baltic / Eastern and Mediterranean Europe and North Africa

# ... AND IS CONSUMER-DRIVEN

End-use energy demand 2003-2020 by region  
QBTU, percent

- The share of global demand driven by consumers increases from 53% to 54%
- Consumers drive 57% of global demand growth (70% in developed regions, 55% in developing regions)

\* Air and road transportation; residential and commercial buildings

# ENERGY DEMAND IN CHINA AND THE MIDDLE EAST CATCHES UP WITH THE US AND NORTHWESTERN EUROPE BY 2020

Total primary energy demand  
QBTU

2003-20  
CAGR

4.4%

1.1%

0.9%

4.5%

Total petroleum product demand  
QBTU

2003-20  
CAGR

1.5%

5.1%

4.6%

0.8%

# U.S. ENERGY DEMAND GROWTH ACCELERATES TO 1.2%; ENERGY PRODUCTIVITY THE LARGEST UNCERTAINTY

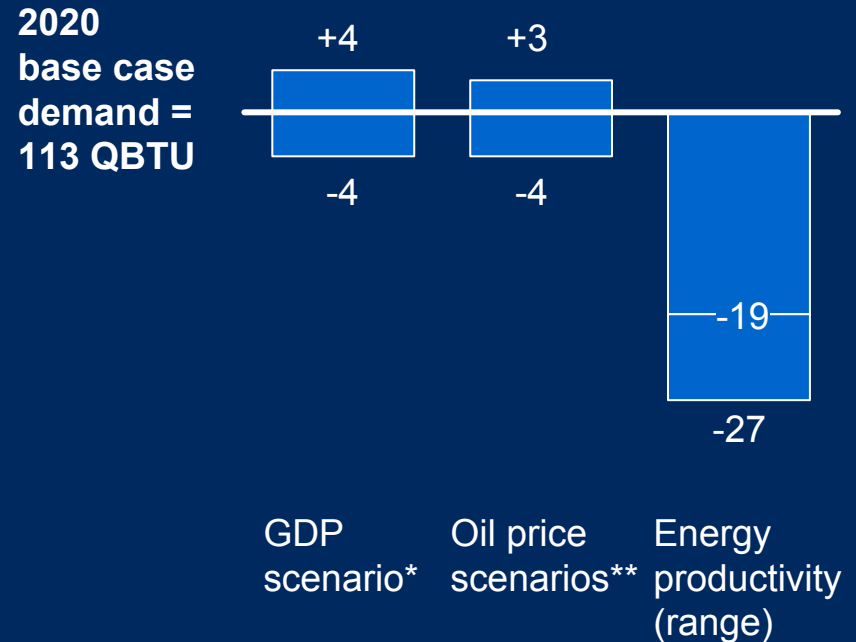

Energy demand growth 2003-20 outpaces historical period in most scenarios

Energy productivity is the main uncertainty for energy while oil price and GDP have a more moderate, similar impact

MG U.S. demand scenarios  
QBTU

\* ± 0.5% vs. Global Insight GDP growth projection

\*\* 30\$ and 70\$ oil scenarios vs. base case of 50\$ oil scenario

# THE U.S. REMAINS THE MOST ENERGY INTENSIVE DEVELOPED REGION

\$50 OIL SCENARIO  
BASE CASE GDP

**Total energy intensity, 2020**  
Thousand BTUs /real \$ GDP

2003  
2020

**Energy per capita, 2020**  
Million BTU /capita

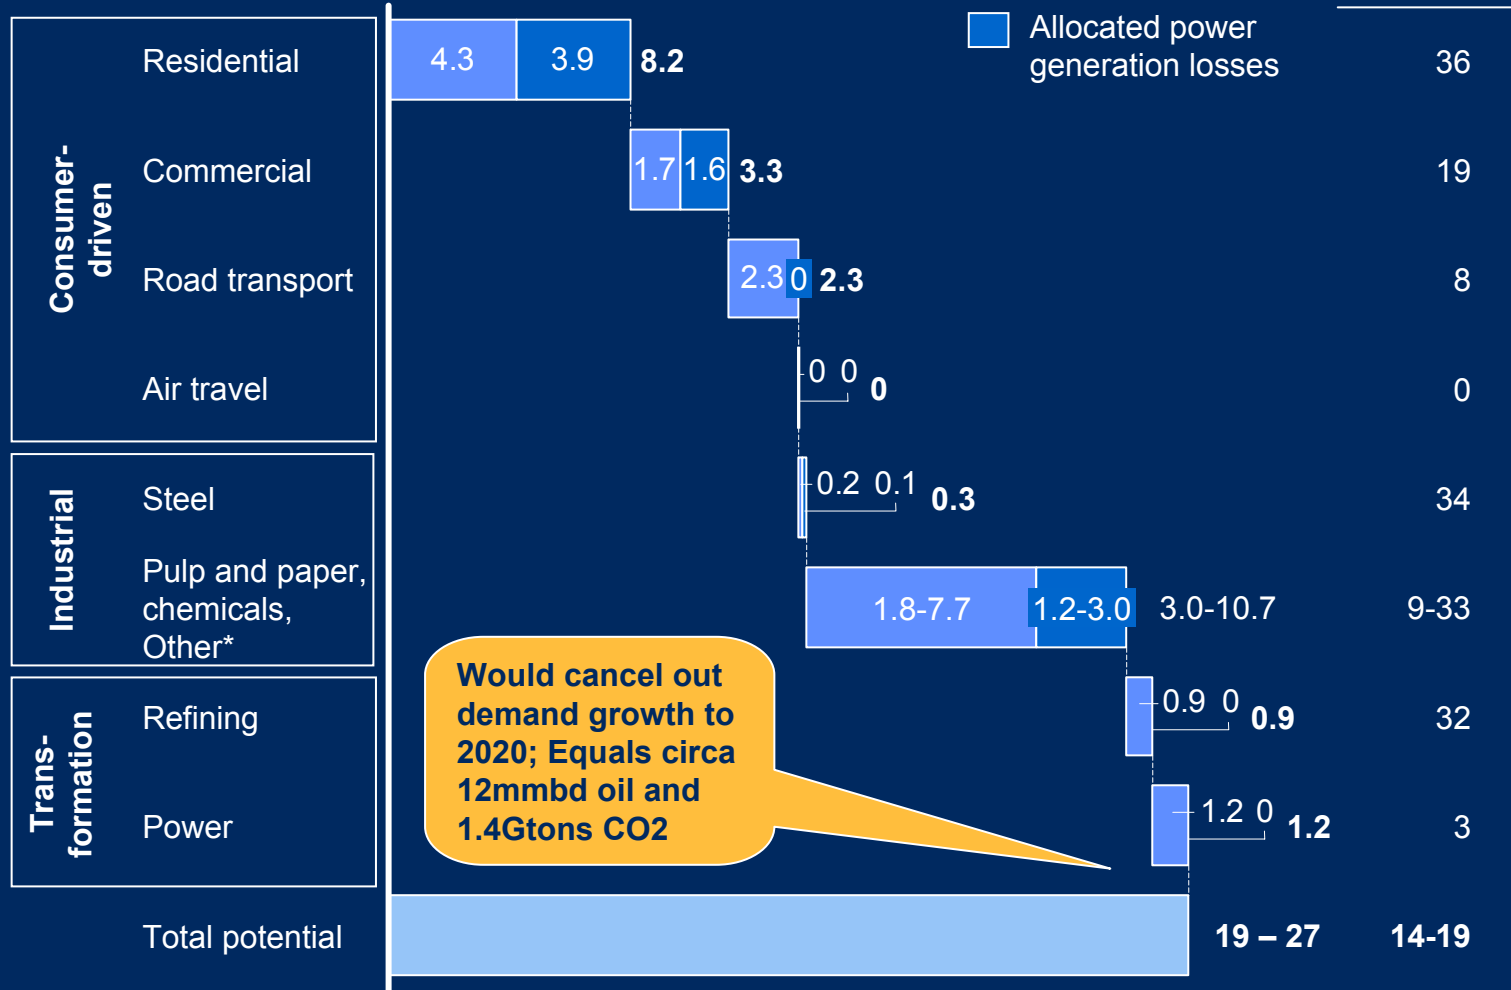

# US ENERGY PRODUCTIVITY OPPORTUNITY

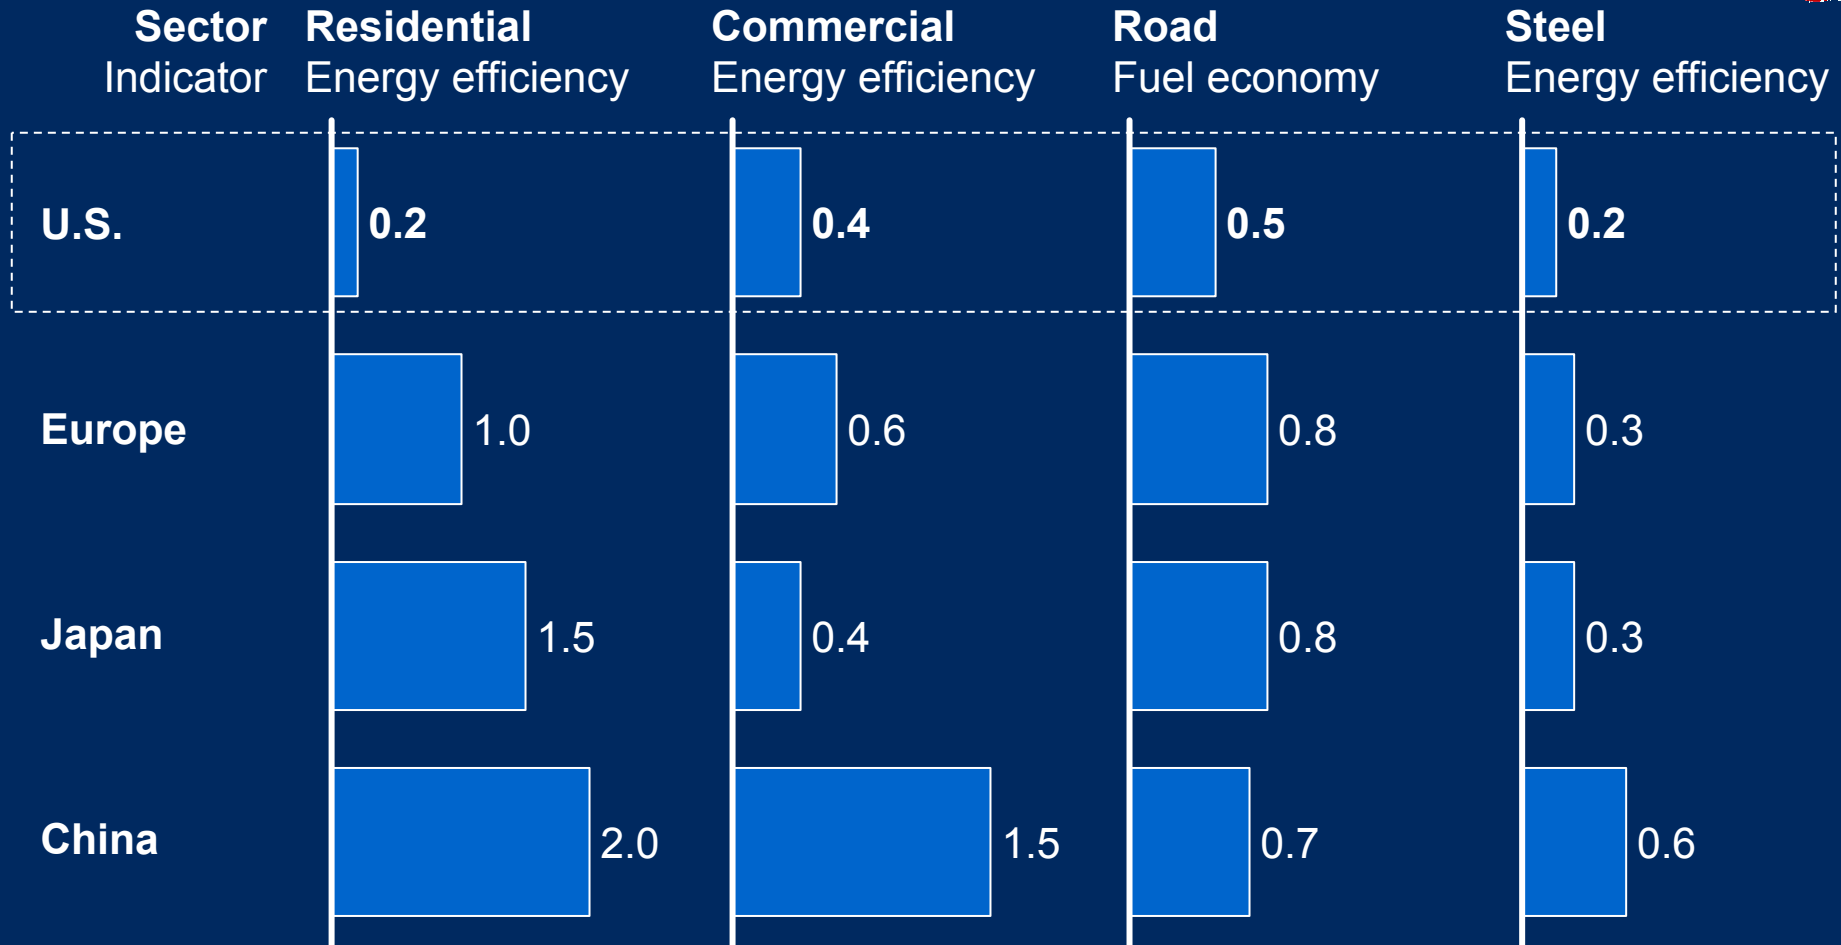

Potential demand reduction in 2020 through enhanced energy productivity  
QBTU

Percent of 2020 sector demand  
Percent

# ENERGY PRODUCTIVITY IMPROVEMENTS ARE LOWER IN THE U.S. THAN IN EUROPE AND JAPAN ACROSS ALL SECTORS

Annual improvement of energy-productivity indicators, 2003-2020

# LIKE LABOR AND CAPITAL PRODUCTIVITY, ENERGY PRODUCTIVITY IS RELEVANT FOR COMPETITIVENESS

- Energy productivity measures the output and quality of goods and services generated with a given set of inputs
  - \$79 billion of GDP per QBTU of energy inputs globally
  - The inverse--energy intensity of GDP equals 12,600 BTUs/GDP \$ output.
- Energy productivity improvements can be achieved either by reducing the energy inputs required to produce the same level of energy services, or by increasing the quantity or quality of economic output
- When identifying opportunities for energy productivity improvements, we focus on changes that rely on currently existing technologies and have an internal rate of return (IRR) of 10 percent or more
- Our exclusive focus on economic opportunities means that making these investments would benefit the economy rather than just reducing demand
- And, understanding energy productivity is key to companies remaining competitive in the global markets going forward (e.g., auto-makers)

# DISTORTING POLICIES AND MARKET IMPERFECTIONS REDUCE ENERGY PRODUCTIVITY CAPTURE

## Examples

---

### Policy distortions

- Fuel subsidies for
- Energy subsidies or non-marginal pricing
- Lack of financial incentives for public industries

### Lack of information

- Consumers unaware of the cost of their energy choices and unable to track performance
- Fragmented energy costs often go unmanaged by companies

### Agency issues

- Landlords and tenants opting for lower energy productivity when benefits don't accrue to them
- Appliances makers don't adopt efficient materials and technologies if scale for upgrade unclear

### Financing issues

- High hurdle rates in many commercial and industrial companies
- Credit constraints for MUSH and residential segments

# IF CRUDE PRICES REMAIN HIGH, WE COULD SEE GLOBAL PEAK DEMAND FOR PETROLEUM BEFORE 2015

		2005 - 2010	2010 - 2015	2015 - 2030
		Near-term: Demand Destruction	Medium-term: Accelerating Substitution	Longer-term: Technology Innovation
<b>Behaviors</b>	<b>Vehicle miles traveled</b>	<ul style="list-style-type: none"> <li>Falling VMT</li> </ul>	<ul style="list-style-type: none"> <li>Beginning structural reduction in VMT</li> </ul>	<ul style="list-style-type: none"> <li>Step change in VMT holds going forward</li> </ul>
<b>Substitution</b>	<b>Biofuels</b>	<ul style="list-style-type: none"> <li>Biofuels as blendstock</li> </ul>	<ul style="list-style-type: none"> <li>Biofuels as base-stock</li> </ul>	<ul style="list-style-type: none"> <li>Broad-based substitution</li> </ul>
